# SQL FOUNDATION

INTRODUCTION TO RELATIONAL DATABASE

# OBJECTIVES

- SQL with Relational Databases
- Retrieve data
- Database tables
- Filter data
- Group data

# SQL OVERVIEW

- Structured Query Language
- SQL standard
  - Database extensions

# SQL LANGUAGE GROUPING

- Data Manipulation Language (DML)
- Data Definition Language (DDL)
- Data Control Language (DCL)

# RELATIONAL BASICS

- Employees

| Employee_ID | First_Name | Last_Name | Dept_ID | Location_ID |
|-------------|------------|-----------|---------|-------------|
| 1001        | John       | Jones     | 10      | 100         |
| 1002        | Susan      | Smith     | 20      | 100         |
| 1003        | Jackson    | Black     | 10      | 200         |
| 1004        | Thom       | Thomas    | 20      | 300         |
| 1005        | Robert     | Reid      | 10      | 400         |

# RELATIONSHIPS

- Employees and Departments

| Employee_ID | First_Name | Last_Name | Dept_ID | Location_ID |
|-------------|------------|-----------|---------|-------------|
| 1001        | John       | Jones     | 10      | 100         |
| 1002        | Susan      | Smith     | 20      | 100         |
| 1003        | Jackson    | Black     | 10      | 200         |
| 1004        | Thom       | Thomas    | 20      | 300         |
| 1005        | Robert     | Reid      | 10      | 400         |

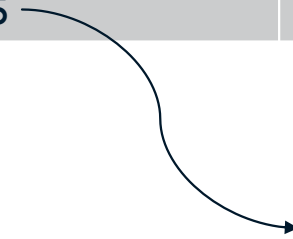

| Dept_ID | Name            |
|---------|-----------------|
| 10      | Human Resources |
| 20      | Sales           |

# RELATIONSHIPS

- Employees and JobHistories

| Employee_ID | First_Name | Last_Name | Dept_ID | Location_ID |
|-------------|------------|-----------|---------|-------------|
| 1001        | John       | Jones     | 10      | 100         |
| 1002        | Susan      | Smith     | 20      | 100         |
| 1003        | Jackson    | Black     | 10      | 200         |
| 1004        | Thom       | Thomas    | 20      | 300         |
| 1005        | Robert     | Reid      | 10      | 400         |

| Employee_ID | Position_ID | Start_Date | End_Date |
|-------------|-------------|------------|----------|
| 1005        | 2011        | 20180824   | 20200105 |
| 1005        | 2015        | 20200106   | NULL     |

# SELECT STATEMENT

`SELECT column1 [, column2 ...] FROM tablename`

For example

`SELECT * FROM Employees;`

`SELECT First_Name, Last_Name FROM Employees;`

# DISTINCT SELECT STATEMENT

`SELECT DISTINCT columnI FROM tablename`

For example

`SELECT DISTINCT Last_Name FROM Employees;`

# LITERAL STRINGS

- Single quotes are most commonly used

# JOINING TABLES

```
SELECT First_Name, Last_Name, Name  
FROM Employees JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID;
```

```
SELECT First_Name, Last_Name, Name  
FROM Employees LEFT JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID;
```

# FILTERING

```
SELECT First_Name, Last_Name, Name  
FROM Employees JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID  
WHERE Last_Name = 'Smith';
```

## SORTING DATA

```
SELECT First_Name, Last_Name, Name  
FROM Employees JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID  
WHERE Last_Name = 'Smith'  
ORDER BY Name DESC;
```

## AGGREGATING DATA

```
SELECT COUNT(Location_ID) FROM Employees;
```

## GROUPING DATA

```
SELECT COUNT(Employee_ID), Name FROM Employees  
JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID;
```

```
SELECT COUNT(Employee_ID), Name FROM Employees  
JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID  
GROUP BY Name;
```

## SELECTING GROUPS

```
SELECT COUNT(Employee_ID), Name FROM Employees  
JOIN Departments  
ON Employees.Dept_ID = Departments.Dept_ID  
GROUP BY Name  
HAVING COUNT(Employee_ID) > 10;
```

**THANK YOU**
